Hello again,

First of all a very Merry Christmas to you and your dear ones.

I did download the template and thank you again.

I tried to build it on an HyperVM platform and it built the server but when it tried to start it received the following error:

Alert: Could Not Start Vps, Reason: vzquota : (warning) quota usage is invalid for id 180, recalculating disk usage...: vzquota : (error) quota check : stat /vz/private/180.tmp: No such file or directory: vzquota on failed [1]:

I do not know if this is realted to the template or not.

As you suggested i allocated 15GB disk space and 512 MB guaranteed RAM to the template.

I then tried to create it with unlimited diskspace (160GB SATA maximum) and unlimited (4GB RAM maximum) on a Pentium D 3.0 GHz platform running HyperVM and it worked fine.

Kindest regards and thanks for all,
