A crazy but workable advice (I was able to run KDE environment inside VE) :

Mount /proc from HN to VE. i.e.:

```
# umount -l /vz/root/$VEID/proc  
# mount -t proc proc /vz/root/$VEID/proc
```

But seriously speaking you'd better run X server on the HN and all window stuff inside VE. It's not a big restriction but it provides isolation.
