---

According to SWsoft there is no basis template for

- 1) RedHat Enterprise Linux Version 4 ES 32 bit
- 2) RedHat Enterprise Linux Version 4 ES 64 bit

I would like to create such OS template (regular OS template , no EZ OS template).

I would like to know if I can use for this purpose a dedicated server without Virtuozzo installed over it.

Only to install the vzsnapshot RPM package over the dedicated server and then start the process of creating the OS basis template.

I would like to know if someone has done such process and can write some suggestions.

for instance , which partition table it's need to create over the dedicated server ?

because Virtuozzo is not installed on the dedicated server , is it OK not to create the /vz partition ? or it must be created ?
