I found a solution to my problem here in case anyone else runs into it:

<http://forum.openvz.org/index.php?t=tree&th=6388&mid=31855&&rev=&reveal=>

It allowed me to create the cache. However there were still alot of erros that were displayed along the way.

I think that I'm going to switch to manually making new templates based on some of the pre-created cache files as has been suggested elsewhere on the forum.

Thanks,

Daniel
