Hi all,

hope this is the right section and even the right forum for asking help on this problem.

Using LVM2 i have this partion layout:

```
LABEL=/          /          ext3 defaults 1 1
/dev/VolGroup00/VZ  /vz          ext3 defaults 1 2
/dev/VolGroup00/VZDUMP /dump          ext3 defaults 1 2
/dev/VolGroup00/BACKUP /backup        ext3 noquota,rw 1 2
LABEL=/boot       /boot         ext3 defaults 1 2
tmpfs              /dev/shm      tmpfs defaults 0 0
devpts             /dev/pts      devpts gid=5,mode=620 0 0
sysfs              /sys          sysfs defaults 0 0
proc               /proc         proc defaults 0 0
LABEL=SWAP-sda3    swap          swap pri=0,defaults 0 0
```

Now i have all my container inside /vz and i backup on /dump.

Everything works fine, but i'm a bit worried about some error/message that i got inside messages when using snapshot.

From command line there are no errors:

```
~]# vzdump11 --dumpdir /dump --snapshot 440
INFO: Starting new backup job - vzdump --dumpdir /dump --snapshot 440
INFO: Starting Backup of VM 440 (openvz)
INFO: status = CTID 440 exist mounted running
INFO: creating lvm snapshot of /dev/mapper/VolGroup00-VZ ('/dev/VolGroup00/vzsnap')
INFO: Logical volume "vzsnap" created
INFO: mounting lvm snapshot
INFO: creating archive '/dump/vzdump-440.dat' (/mnt/vzsnap/private/440)
INFO: Total bytes written: 142192640 (136MiB, 10MiB/s)
INFO: file size 135MB
INFO: Logical volume "vzsnap" successfully removed
INFO: Finished Backup of VM 440 (00:00:17)
```

But looking inside log message i see those line:

```
Jan 20 16:39:56 srv1 vzdump[12782]: Starting new backup job - vzdump --dumpdir /dump
--snapshot 440
Jan 20 16:39:56 srv1 vzdump[12782]: Starting Backup of VM 440 (openvz)
Jan 20 16:39:58 srv1 kernel: kjournald starting. Commit interval 5 seconds
Jan 20 16:39:58 srv1 kernel: EXT3 FS on dm-3, internal journal
Jan 20 16:39:58 srv1 kernel: EXT3-fs: dm-3: 25 orphan inodes deleted
Jan 20 16:39:58 srv1 kernel: EXT3-fs: recovery complete.
Jan 20 16:39:58 srv1 kernel: EXT3-fs: mounted filesystem with ordered data mode.
Jan 20 16:40:13 srv1 vzdump[12782]: Finished Backup of VM 440 (00:00:17)
```

Is there something of anomalous ?

Why those lines EXT3-fs: dm-3: 25 orphan inodes EXT3-fs: recovery complete ?

The system has an array of 4 disks in raid10 mode.

Tricked searching both this forum and web, and I can't find a solution.

Thanks in advance for any suggestion.
