Quote:I would recommend stock 2.6.16 or 2.6.8.

```
virt:~/Soft # uname -a
```

```
Linux virt 2.6.16-026test007-15-smp #3 SMP Fri Apr 14 10:10:10 CEST 2006 i686 i686 i386
```

```
GNU/Linux
```

I'd like to install next release.

Quote:Was there anything on the screen or you have no access to it? Can you install serial on net console? This will help us to get kernel messages if something fails.

Check this HOWTO: <http://wiki.openvz.org/Troubleshooting>

There are no messages on screen. Login: only.
