Subject: Help ....Please ... Is this Possible
Posted by msl7868 on Sat, 24 Jan 2009 22:00:41 GMT

I have successfully created 2 container with OpenVZ and successuflly installed the "Trixbox/Asterix" application.

VZ1 has extesntion 1 to 5
VZ2 also has extension 1-5

VZ1 and VZ2 has internal private IP address and are sharing one public IP address

I can definately access the internet from VZ1 and VZ2
but now I want to be able to register phones to VZ1 and VZ2 and I am unable to do that so far

I look and read a few articles through the forum but no one actually stated step by steps on how they achieved their success

This is all new to me so please provided me with step by step instruction is possible

Any help is greatly appreciated

Thanks
