I tried to duplicate your problem.
I first looked to a key enabled in the "sysctl.conf" file.
(i.e. Proxy_ARP = 1)
The only way I was able to duplicate your problem was;

If you use a static configuration of the bridge,(i.e ifcfg-brX),
and the MAC address of the bridge device is not entered into the
configuration (i.e HWADDR=aa:bb:cc:dd:00:11),the bridge IP address is not seen,but others are.
