I already tried to play arround with the

--devices / --devnodes

options, but the problem I encoutered was, that due to a lack, that the modul directory of the kernel wasn't available in side each VPS, he couldn't handle the XFS filesystem.

To Copy the Content from one disk to another is quite a little bit nasty.
Its almost 80 Gigs and takes a while (IDE)

Well gona try the other solution sone
