The tue2fs hint fixed this problem...

I have checked the filesystem with your suggestion.

Quote:
[root@fedorahost ~]# tune2fs -l /dev/mapper/VolGroup00-vps001 | grep "Default mount options"
Default mount options: (none)

As you supposed the default mount options are : none.
I set these options on mount device via tune2fs as DEFAULT option at HN.

 Quote:
[root@fedorahost ~]# tune2fs -o user_xattr,acl /dev/mapper/VolGroup00-vps001
tune2fs 1.41.3 (12-Oct-2008)
[root@fedorahost ~]# tune2fs -l /dev/mapper/VolGroup00-vps001 | grep "Default mount options"
Default mount options: user_xattr acl

And test it at inside VE. It's working !!

Thank you very much.
