---

I have openvz on a server with 4 gigs ram.

I have 5 vms.

ram usages usually shows as ~:

vm1 160/512

vm2 272/512

vm3 539/2048

vm4 381/512

vm5 279/512

I have 2 vms that keep crashing with the:

"Cannot Allocate Memory" error.

It doesn't matter how much ram I give them the ram usage suddenly spikes and the vm is unusable.

any ideas as to what is going on wild be great!!!
