
Subject: 2 Digit IDs - Updated

Hi All

I am pretty new to VZ but have managed to get a server up and running to be a backup for an existing VZ server setup by someone else in our organisation. Trouble is he created his VMs with 2 digit IDs. I wanted to do a vzdump and then move the dumps to the new backup server to make sure they run but vzdump does not seem to like the 2 digit IDs.

Is there anyway to force vzdump to run? Alternatively, is it safe to change the container names?

Update - I have found a way to change the container names. This helps a bit but there are a few machines I want to move that I can't take offline to rename so still looking for a way to force the vzdump.

Thanks

Simon
