Hello,

this output confused me.

I cannot see /vz as a separate partition at the same moment we see
"lvm:VolGroup01/130 /vz/root/130 simfs rw 0 0". Could you possibly explain how this might
happened? How did you configure the HN?

And if /vz is not a separate partition "df -h" shows only 55Gb available so no wonder we obtain the
similar result inside VE.
Thank you.
