Hello Every Body,

I'm new openvpz user and i have some thing i dont know in it.

now i installed openvz correctly and i created a first vps but the problem is in the vps network i can login to it from the main server ssh but when u try to login to it via the ip which i assigned to it it doesn't work and the ip still open the main server not the vps, so how i can assign ip the my vps and make it work

Regards.
