Subject: iptables is not logging
Posted by mfTHpoiw on Mon, 02 Mar 2009 21:27:04 GMT

Hi all,

I hope this forum is the correct place to ask my question.

I have a VPS running Ubuntu 8.04. In a script there are the following lines:

iptables -D INPUT -s $net -j LOG --log-prefix "BLACKLIST: "
iptables -D INPUT -s $net -j DROP

$net stands for 192.168.100.0/24 for example. I know that the DROP action is working. But the LOG action does not go to any of the log files.

Does somebody know what the problem is causing?

Thank you,
Timo
