Do you know if the you know if they have stopped vtonf?

I was able to create a VPS and it is running however I still have some questions.

First, I am running through a tutorial and was trying to install yum to the container and am getting an error there is no OS template.

the command I ran is:

```
vzyum 101 install yum
```

after which they want to run the following command

```
vzyum 101 install yum-plugin-fastestmirror
```

Any suggestions?
