Hello,

where do you get atl2 sources for 2.6.18 kernel?

I googled a little bit and found only http://webui.sourcelabs.com/centos/mail/user/threads/atl2.ko _in_Centos_5.meta there is a link to http://repo.redhat-club.org/redhat/5/SRPMS/

So, I downloaded and install atl2-1.0.40.4-el5.rhc.1.src.rpm. And compile it against 2.6.18-92.1.18.el5.028stab060.2 (i686) the only change I made is in file kcompat.h. I attached that diff and atl2.ko just in case.
