Hello,

where do you get atl2 sources for 2.6.18 kernel?

I googled a little bit and found only

http://webui.sourcelabs.com/centos/mail/user/threads/atl2.ko_in_Centos_5.meta

there is a link to

<http://repo.redhat-club.org/redhat/5/SRPMS/>

So, I downloaded and install atl2-1.0.40.4-el5.rhc.1.src.rpm.

And compile it against

2.6.18-92.1.18.el5.028stab060.2 (i686)

the only change I made is in file kcompat.h.

I attached that diff and atl2.ko just in case.
