Hello,

Quote:
the ordinary kernel has automatically detected those cards

what version is that kernel? And what kind of OpenVZ kernel do you use?

Quote:
but the openvz kernel is not detecting the second card.

How did you detect this?
Are you sure that appropriate driver is loaded?
What kind of network card do you have (check "lspci", "lspci -n" output)?
Show also "ip a l" when OpenVZ and nonOpenVZ kernels are loaded.
