Subject: See daemon startup messages?

Posted by FrankB on Sun, 15 Mar 2009 16:34:42 GMT

Hi,

I'm toying with OpenVZ since September last year when it seemed that VServer will not make it to Debian lenny. Since then, I prefer OpenVZ to VServer on my home machines

However, before moving company's VServers to OpenVZ, I would like to have one possibility that I've had with VServer since day 0. When starting the container, I would like to see the output of the daemons tellings me e.g.:

    Starting apache ... done.
    Starting unfs ... failed.

Is this possible?

Thanks,
Frank
