Dear all

It has been sometime I was busy and inactive. After receiving several emails about webvz that it is not running under latest ruby on rails versions. I have modified it to work with that. At the moment there is no extra features added to it.

You can download the latest webvz from github.com at the following link
<http://github.com/shuaibzahda/webvz/tree/master>

Please choose download and download the file, extract it and run it as usual

for more information visit the website of webvz at <http://webvz.sourceforge.net>

I will be glad to receive new features to be added in the coming release

Thanks
Shuaib Zahda
WebVZ Developer
