Subject: OpenVz on 64 bit Fedora 10
Posted by isoips on Fri, 20 Mar 2009 07:35:16 GMT

I would like to try OpenVZ. I have a Fedora 10 distro (x86-64), with Xen installed. So I would install OpenVZ, leaving Xen and Fedora 10 original kernel.
I think it is possibile to create a new entry on menu.lst which I can select to boot openvz or other operating system.
Is it possibile?

My current kernel is 2.6.27.5-117-fc10-x86_64.

Thank you
