Subject: Re: Nginx detects my HN IP address
Posted by silentninja on Wed, 25 Mar 2009 07:06:02 GMT

Now I think I know why this happened !

On my "iptables -t nat" settings, I've setup this line:

MASQUERADE all -- anywhere   anywhere

To allow some IP redirections that I've set there before.. I think it might be doing something wierd though because of it masquerades all requests from every IP address.

EDIT: YEAH ! It was because of that, but I cannot remove that line, because my IP redirections won't work properly.. I might have to edit that a little so it doesn't touch the venet0 address.
