Hi

I newbie with Openvz and would like to try it.

I have a Orinoco pcmcia wireless card with a pcmcia PCI bridge (Yenta).

This card works only (for me) with Slackware or Ubuntu. The others distributions not wooks with this pcmcia pc bridge.

A question : If I install Openvz in a CentOS server then the guest linux (ie. Slackware or Ubuntu) can access and use the orinoco card ?

With Openvz I have access to pci devices like Orinoco card and bridge ?

Thanks in advance.

roberto
