Thanks for the reply, but can you answer this question for me.

As mentioned I have a phone 555-1212 for Customer A pointing to public IP xx.xx.xx.x on VZ1

I Also have phone# 555-1313 for customer B pointing to the same public IP xx.xx.xx.x on VZ2

If both phone are pointing to the same public IP how will it know to go to their respective container since they are both using the same port 5060
