maratrus wrote on Wed, 01 April 2009 10:59I have

So, the ideal situation would be a serial console

http://wiki.openvz.org/Remote_console_setup

and alt-sysrq-

- p (twice the number of CPUs)

- w (several times)

- t (for all processes calltrace. this is a time consuming operation)

ok, thank's for the tips

now we moved to plain apache on this machine(so far it's stable)

but I'll try to run it on test machine and try to trigger this issue again and log to netconsole
