Subject: Accessing ALSA sound devices within VPS
Posted by starfry on Mon, 06 Apr 2009 22:02:56 GMT

Hi,

is it possible to use the host's ALSA dound devices from within a VPS?

I have tried enabling the devnodes:

vzctl set 109 --devnodes snd/hwC0D0:rw
vzctl set 109 --devnodes snd/controlC0:rw
vzctl set 109 --devnodes snd/hwC0D1:rw
vzctl set 109 --devnodes snd/pcmC0D0c:rw
vzctl set 109 --devnodes snd/pcmC0D0p:rw
vzctl set 109 --devnodes snd/seq:rw
vzctl set 109 --devnodes snd/timer:rw

The card is listed by asoundconf but I can't get it to work:

$ asoundconf list
Names of available sound cards:
Intel
$ asoundconf set-default-card Intel
$ amixer
amixer: Mixer attach default error: No such device

I thought I'd ask here before i go any further in case getting this to work in a VPS is a no-go...
