Subject: wvz - another php based interface
Posted by scythe on Sun, 04 Jun 2006 19:30:52 GMT

Hi,

after downloading Ronny's toolkit, I decided to release my own php based interface too, on which I was working for the last few weeks in my spare time. I tought I might give it a shot, because it's very different from the Admin toolkit in many ways.
First, it's not based on Cron, it's using it's own setuid binary for execution.
Second, it does not use MySQL.
There are much more differences, You will see.

The webpage: http://homaly.dunanet.hu/wvz/
(Some screenshots at http://homaly.dunanet.hu/wvz/screenshots/)

It's fully GPL. And it's the first release, so consider it beta. If you find a bug send a report (or the patch) to me.

Happy downloading, I hope somebody can use it.
