Server-based - SuperMicro SYS-1025W-URB 1U/2xLGA771/i5400/FSB
1600/8xDDR2-800/8x2, 5 SATA (HS) / 2Glan/VGA/2 * 650W

Raid controller - SAS Adaptec ASR-5805

The system - Debian 5.0

```
01: /home/cookie# uname-a  
Linux 2.6.26-1-amd64 # 1 SMP Fri Mar 13 17:46:45 UTC 2009 x86_64 GNU / Linux
```

Install the kernel with support for openvz, reboot ...

```
# sudo apt-get install linux-image-2.6.26-1-openvz-amd64  
# reboot
```

Most of the daemons do not run, displaying the error to the console.
For example, look at what gives sshd error when I try to login

What is the reason for these errors?
How can I fix these errors?

p.s. Kernel without openvz, no problems.

Sorry for my bad English.
