Subject: Choice of a Container to connect in during the boot
Posted by Balbuzard on Mon, 13 Apr 2009 23:48:53 GMT

Hi!
I use OpenVZ during a while, now, and I just want to know if it is possible to connect to a
Container during the boot and forbid to log in another container with OpenVZ tools.
For example, The user switch the computer on, he has the choice of the different containers, he
connects to his own. If he wants to switch, he has to know the password of the other one. Exactly
the same for a session, but with root rights on it.
Don't hesitate to ask me any question if it is not perfectly clear!
Thanks for your answers!
