I guess there is bug between OpenVZ and UnionFS.  
I dont know which side is wrong (OpenVZ or UnionFS),  
but anyway, it has bug. See the log attached.

The key point is, it has no problem if you dont mount /proc,  
but once you mount it, even just doing "ls -la" hangs.

Version:

2.6.16-026test009

unionfs-20060529-2327

BTW, I feel there also bug in ext3 joraling recovery.  
( Not ext3 itself, but jbd recovery).

I can not find out the condition of the problem so far,  
but I have seen many times that recovering locks the kernel.  
In all of such cases, there is no message, just hangs.
