Subject: UnionFS bug Posted by Jun OKAJIMA on Mon, 05 Jun 2006 10:42:45 GMT View Forum Message <> Reply to Message

I guess there is bug between OpenVZ and UnionFS. I dont know which side is wrong (OpenVZ or UnionFS), but anyway, it has bug. See the log attached.

The key point is, it has no problem if you dont mount /proc, but once you mount it, even just doing "Is -la" hangs.

Version: 2.6.16-026test009 unionfs-20060529-2327

BTW, I feel there also bug in ext3 jornaling recovery. (Not ext3 itself, but jbd recovery). I can not find out the condition of the problem so far, but I have seen many times that recovering locks the kernel. In all of such cases, there is no message, just hangs.
