Subject: Re: Can OpenVZ kernel support module for ipvsadm to kernel??
Posted by nick_chang on Thu, 23 Apr 2009 04:21:06 GMT

I install ipvsadm on VE

If I input ipvsadm -l.

Display follow error message.

FATAL: Error inserting ip_vs
(/lib/modules/2.6.18-53.1.13.el5.028stab053.10ent/kernel/net/ipv4/ipvs/ip_vs.ko): Operation not
permitted
Can't initialize ipvs: Protocol not available
Are you sure that IP Virtual Server is built in the kernel or as module?

So, Are you sure the ipvs is built in the kernel or as module??

Thanks
Nick
