Subject: df showing wrong output - SOLVED
Posted by stukov on Wed, 29 Apr 2009 14:32:40 GMT

What could possibly cause df to output the wrong output? I have an OpenVZ virtual environment that hosts large data files, however, there is a huge mismatch between du and df output:
$ du -sh /miroir/
90G /miroir/
$ df -h

Filesystem	Size	Used	Avail	Use%	Mounted on
/dev/simfs	191G	8.0G	183G	5%	/
none	3.9G	4.0K	3.9G	1%	/dev

Any ideas?

Thanks for your help.
