maratrus wrote on Mon, 04 May 2009 21:29Hi,

looks like you have to set up iptables inside VE in a proper manner. Check the appropriate section in OpenVZ User's guide

<http://download.openvz.org/doc/OpenVZ-Users-Guide.pdf>

hope it helps you.

Hi maratrus,

Thanks for your advice and link.

# iptables -L

Chain INPUT (policy DROP)

| target | prot | opt | source   | destination |
|--------|------|-----|----------|-------------|
| ACCEPT | all  | --  | 0.0.0.0  | anywhere    |
| ACCEPT | all  | --  | anywhere | anywhere    |

Chain FORWARD (policy DROP)

| target | prot | opt | source  | destination |
|--------|------|-----|---------|-------------|
| ACCEPT | all  | --  | 0.0.0.0 | 0.0.0.0     |

Chain OUTPUT (policy ACCEPT)

| target | prot | opt | source | destination |
|--------|------|-----|--------|-------------|
|--------|------|-----|--------|-------------|

I did NOT create the rules manually. I think it comes on installing/configuring Shorewall.

Going through OpenVZ-Users-Guide I found following section;

Loading iptables Modules to Particular VPSs;

```
# vzctl set xxx --iptables iptable_filter --iptables ipt_length --iptables ipt_limit --iptables
iptable_mangle --iptables ipt_REJECT --save
```

Is it relevant to my problem?

I can't find vz file NOR sysconfig directory

```
# find / -name sysconfig -type d
```

No printout

```
# locate vz
```

/etc/rc6.d/S00vzreboot  
/usr/include/envz.h

# find / -name vz -type d  
/proc/vz

Any advice. TIA

B.R.  
satimis
