I have been trying to find how to set User and Group quota inside a container but I can't seem to find a clear answer.

Normally I would do this in a fstab file but I'm not sure that works here. (What would be the /dev/sda1 ?)

Here is the command I would like to implement...

```
/dev/sda1    /          ext3    errors=remount-ro,usrquota,grpquota 0    1
```
