Subject: Re: How to make OpenVZ kernel and KVM module coexist_

I was able to rebuild the lfarkas.org kmod-kvm-85 SRPM package on CentOS 5.3 under the
ovzkernel-2.6.18-92.1.18.el5.028stab060.8.x86_64.

KVM kernel module seems to coexist with openvz just fine. Haven't tried without rebuilding,
though.

2.6.18-92.1.18.el5.028stab060.8.x86_64
kmod-kvm 85
kvm 85
libvirt 0.6.3
virt-manager 0.7.0
qemu 0.9.1

I'm doing further tests now...

Anyone has a similar setup and can comment on stability and other possible issues?
