To install vzctl from sources:

- 1) Download tarball with sources
- 2) Extract sources
- 3) Change directory to the directory with extracted sources
- 4) Give make command:
- \$ make
- 5) Get root privileges
- 6) Give make install command:
- # make install

That's all!

As concerns README in vzctl sources. On my mind it's bad, that there is no README, maybe it's even a bug. So thanks for report!

Good luck.
