venet usw muss man nicht in /etc/network/interfaces eintragen

Es genügt vollkommen ein: vzctl set VEID --ipadd XX.XX.XX.XX --save

Meine sieht z.b so aus:

```
auto lo
```

```
iface lo inet loopback
```

```
auto eth0
```

```
iface eth0 inet static
```

```
    address XX.XX.XX.XX
```

```
    netmask 255.255.255.0
```

```
    broadcast XX.XX.XX.255
```

```
    gateway XX.XX.XX.1
```

```
    up sysctl -w net.ipv4.conf.eth0.proxy_arp=100
```

```
    pre-down sysctl -w net.ipv4.conf.eth0.proxy_arp=0
```
