kir wrote on Wed, 07 June 2006 11:41 This is actually a TCP feature. Default (and recommended by an RFC) TCP timeout is about two minutes if I remember correctly. So if the application is using TCP, it will be fine. Surely we tested that with Apache, MySQL, Oracle and other apps.

ROCK ON!! I didn't know that...

And I suppose UDP doesn't care if some packets are lost?
