Hello,

I'd recommend you to use the latest RHEL5 based kernel
 http://download.openvz.org/kernel/branches/rhel5-2.6.18/028s tab062.3/

As it is based on RHEL5 kernel, you may expect it to work as a native RHEL5 kernel. So, if it is
not able to boot, please try the pure RHEL5 kernel and don't hesitate to file a bug into bugzilla if
booting results are different.
