Hi,

first of all i think you need to understand the reason why shorewall restart helps.

i think you can get it by the following:

- 1) your system is up and running
- 2) you create a new CT with new IP
- 3) check that you cannot ping the internet and save the iptables configuration (iptables-save should be enough?)
- 4) restart shorewall
- 5) check that you can ping the internet now and save the iptables configuration once more
- 6) compare the iptables configurations.

Hope this helps.
