Hi !

The last questions :

I'm going to make a shell script with "for" to change the parameters of all VEs, there are some command to disable the CPU variable?

Something like :

```
vzctl set $VE --cpulimit 0 --cpus 0 --save
```

The manpage of vzctl only shows :

Quote:

```
--cpus num  
    sets number of CPUs available in the container.
```

And, there are some vzctl command to set the VE0CPUUNITS variable? or i have to set it editing the vz.conf file? I guess i have to restart the daemon after edit VE0CPUUNITS ?
