hello,

i have this problem. i create a container in my node and i have added the ip in the vps with the command `vzctl --ipadd .`

the problem is this:

the ip-vps not work. if i ping the ip-vps from the node the ip work and viceversa. but if i ping the ip-vps from my pc the ip-vps it's unreachable.

any ideas?

i use centos 5.3, 2.6.18-128.1.1.el5.028stab062.3 and vzctl 3.0.23.

thank you
