## Subject: Re: Awful proxy_arp performance
Posted by tobia on Mon, 06 Jul 2009 10:52:01 GMT

I solved this issue using veth instead of vnet and bridging all the veth* together with eth0.
Configured this way, ARP requests are back to a reasonable average of 3ms.

I would still like to know if it can be solved any other way. Isn't vnet supposed to be more efficient than veth?
