Subject: VEs and dmz
Posted by ferp2 on Fri, 09 Jun 2006 14:36:40 GMT

Hello,

I have set up ovz as follows:

There are 2 physical ethernet devices (eth0, eth1) on the hardware node which I use as a router/firewall between the LAN (192.168.0/24) and DMZ (192.168.1/24). The DMZ uses a Linksys router to connect to the internet.

The VEs are all on the LAN subnet.

Is it possible to create another VE and put it on the DMZ subnet?
Is it sufficient to do:

vzctl set <new_ve> --ipadd 192.168.1.x --save

Or do I have to set any additional routing parameters?

Thank you.
