I have been googling problem with setting up ufw (Ubuntu FireWall) for hours now and no success answer anywaere.

I also searched this place and no answer so far.

So heres a problem.

Installation goes perfectly fine. Im able to add rules and so on but problem comes when im trying to enable firewall:

```
root@piplite:/# ufw enable
ERROR: problem running init script
and more
```

```
root@piplite:/# ufw enable
```

Firewall started and enabled on system startup

```
root@piplite:/# sudo /etc/init.d/ufw force-reload
```

```
* Stopping firewall: ufw...
  [ OK ]
* Starting firewall: ufw...
  iptables-restore: line 71 failed
* Problem running '/etc/ufw/before.rules'...
  iptables-restore: line 34 failed
* Problem running '/etc/ufw/after.rules'...
  error: "Operation not permitted" setting key "net.ipv6.conf.all.accept_redirects"
error: "Operation not permitted" setting key "net.ipv6.conf.default.accept_redirects"
error: "Operation not permitted" setting key "net.ipv4.icmp_echo_ignore_broadcasts"
error: "Operation not permitted" setting key "net.ipv4.icmp_ignore_bogus_error_responses"
error: "Operation not permitted" setting key "net.ipv4.icmp_echo_ignore_all"
error: "Operation not permitted" setting key "net.ipv4.tcp_syncookies"
error: "Operation not permitted" setting key "net.ipv4.tcp_sack"
```

[fail]

Its also been asked here: <https://answers.launchpad.net/ufw/+question/63832> but no answer.
If anybody knows how to make it work, please advice.

Beforehand thanks.
