Hi ...

I'm told to make this setup would it be possible.... I want 2 openvz containers how should i do the setup...

Due to my limited network experience in this special case please guide me with a

setup for :

/etc/network/interfaces on Host

and how should i configure the containers bridge or nat...

Want i want to do.

The containers should be able to ping the HOST and each other and should be able to connect to the gateway.

Is it possible ???

The 192.168.1 range is a WAN ip of course...

Host 'Debian Proxmox'

ip : 192.168.1.106

subnet : 255.255.255.0

gateway : 192.168.1.105

Container 1 VEID [101] 'Centos 5.2'

ip : 192.168.1.146

Default Gateway : 192.168.1.145

Subnet Mask : 255.255.255.252

Container 2 VEID [102] 'Centos 5.2'

ip : 192.168.1.150

Default Gateway : 192.168.1.149

Subnet Mask : 255.255.255.252

Thanks.

/Michael
