Hi ...

I'm told to make this setup would it be possible.... I want 2 openvz containers how should i do the setup...

Due to my limited network experience in this special case please guide me with a

setup for :

/etc/network/interfaces on Host  
and how should i configure the containers bridge or nat...

Want i want to do.

The containers should be able to ping the HOST and each other and should be able to connect to the gateway.

Is it possible ???

The 192.168.1 range is a WAN ip of course...

Host 'Debian Proxmox'

ip : 192.168.1.106  
subnet : 255.255.255.0  
gateway : 192.168.1.105

Container 1 VEID [101] 'Centos 5.2'

ip : 192.168.1.146  
Default Gateway : 192.168.1.145  
Subnet Mask : 255.255.255.252

Container 2 VEID [102] 'Centos 5.2'

ip : 192.168.1.150  
Default Gateway : 192.168.1.149  
Subnet Mask : 255.255.255.252

Thanks.

/Michael
