The issue has been resolved after the VPS provider viewed this thread:

<http://forum.openvz.org/index.php?t=msg&goto=9094&>

However if you could take a look at the current UBC values and see if they look reasonable in comparison to the other allocated resources of the VPS:

<http://pastebin.com/m18e7b779>

Ram: 256mb

Heh I thought maybe there was something else I can provide... available CPU utilization? Guess not.
